

Changed Production starting with Batch > 323

A change in production method for Mara® Speed SL has led to significant colour deviations of the basic shades 037/056/057. Please consider for mixing formulas!

Colour Deviation

The dE value of the affected basic shades on white substrates at full colour is

SL 037: 1.35 SL 056: 1.18 SL 057: 1.26

For **white blends**, the deviation is quite noticeable:

SL 037: 5.31 SL 056: 1.06 SL 057: 3.02

Technical properties such as printability and flow are not affected by this change.

Custom Inks

Repeat orders of affected custom inks may be delivered with a slight delay as the formulations have to be revised.

For further information on Mara® Speed SL please refer to www.marabu-inks.com

Colour Management

A new ink file for the Marabu ColorFormulator MCF as well as new formulations in the Marabu ColorManager MCM will be available in due time.

Date of change-over

This change becomes effective starting with **batch > 323**. You will find an additional remark on the label stating:

„Attention: Changed Formula“
