

## Better Printability thanks to Solvent Exchange

A change in the solvent combination improves the printing properties of Tampa® Star TPR.

Tampa® Star TPR contains small amounts of a solvent, which is now being replaced to improve the printability of the TPR.

All other properties of the thoroughly dried ink film such as adhesion or chemical resistance remain the same, both in one- and two-component applications.

### Date of Change-Over

This change becomes effective starting with batch **301** (week 1/2023).

**Important for you as a user:** The previous and the new formulations are **mixable**.

You will find an additional remark on the label stating:

**“Attention: Improved Formula”**
